

PREFACE

In computer science, a sorting algorithm is an algorithm that puts elements of a list in a certain order. The most used orders are numerical order and lexicographical order. Efficient sorting is important for optimizing the use of other algorithms (such as search and merge algorithms) that require sorted lists to work correctly; it is also often useful for canonicalizing data and for producing human-readable output. More formally, the output must satisfy two conditions:

- The output is in non-decreasing order (each element is no smaller than the previous element according to the desired total order).
- The output is a permutation (reordering) of the input.

Since the dawn of computing, the sorting problem has attracted a great deal of research, perhaps due to the complexity of solving it efficiently despite its simple, familiar statement. For example, bubble sort was analyzed as early as 1956. Although many consider it a solved problem, useful new sorting algorithms are still being invented (for example, library sort was first published in 2006). Sorting algorithms are prevalent in introductory computer science classes, where the abundance of algorithms for the problem provides a gentle introduction to a variety of core algorithm concepts, such as Big- O notation, divide and conquer algorithms, data structures, randomized algorithms, best, worst and average case analysis, time-space tradeoffs, and lower bounds.

ACKNOWLEDGEMENT

We present herewith pride & pleasure the perfect work of “**COMPARATIVE STUDY AND IMPLEMENTATION OF CONVENTIONAL ALGORITHMS & INNOVATION OF SORTING ALGORITHM**” with the help of ‘C’ aimed to supplement the scholastic attainment as required under the regulation of West Bengal State Council of Technical Education (WBSCTE).

Life of human being is full of interaction. No one is a self-sufficient by himself. In our daily life we go ahead by acquiring something from each other. Whenever anyone is doing serious and important work, where a lot of help and guidance from many people concerned is required, one feels obliged to them. The guidance and cooperation during the project work has left a long impression in our mind and while giving the final shape to our project report. We would like to take a minute to acknowledge those who made this project possible for us.

Mr. Toufique Ahmmad Gazi, our Project Guide. Without his timely co-operation an invaluable guidance the completion of this project would have been a difficult task.

All faculty members of CST department of EPI, who provide their valuable suggestion & knowledge regarding the project.

Last but not the least, our project team. Each and every member is responsible behind the completion of this project.

Thanking You All...

ABSTRACT

The problem of sorting is a problem that arises frequently in computer programming. Many different sorting algorithms have been developed and improved to make sorting fast. In this Project, Optimization of “**Comparative Study and Implementation of Conventional Algorithms & Innovation of Sorting Algorithm**” is done a new sorting algorithm that has been developed to address the shortcomings of the current popular sorting algorithms. The sole aim of this research is to perform an extensive empirical analysis of sorting algorithms against Digit sort Algorithm. Furthermore analysis supports the fact that Optimized “**Digit Sort**” is better in some situation than the current popular sorting algorithms.

BIBLIOGRAPHY

BOOKS FOR OUR PROJECT:

1. Programming In ANSI C by E Balagurusamy.

[Published by Tata McGraw Hill Education Private Limited, 7West Patel Nagar ,New Delhi 110008, 5th edition].

2. Data Structure With C By Seymour Lipschutz.

[Adapted in India by arrangement with the Mc Graw –Hill companies, Inc. , New York Copyright 2001].

3. Dijkstra, E.W. A Discipline of Programming.

[Prentice-Hall, Englewood Cliffs, NJ, 1976].

4. Hoare, C.A.R. Quicksort.

[Computer Journal 5, 1 (April 1962), 10-15].

5. D. Knuth, “Section 5.2.4: Sorting by merging,” in The Art of Computer Programming, Volume 3 - Sorting and Searching.

[ISBN 0-201-89685-0, 1998, pp. 158–168].
